I've purchased a couple of Internet tv on pc software packages from several companies (you should know I'm a TV addict and love getting my hand on the latest gimmicks 😊) and selected the best Internet TV software packs for you in this satellite tv on pc review.

The generic benefits of all software packages are that:

- Get access to Sports, Kids, Shopping, News, Music Channels and Movies
- All packages are extremely easy to use
- No monthly fees. No subscription. No recurring charges.
- It's 100% legal.
- Get access 24/7 anywhere you go, all over the world.
- There is no extra equipment or bothersome TV cards required
- Get channels from at least 78 other countries in Spanish, Arabic, etc

Satellite Direct: The Ultimate Internet TV Software Package

Rating: ■■■■

#1: Satellite Direct

This software is great and comes out best in our satellite tv on pc review. It's new software platform is extremely innovative and they should be really proud of the great job of their software engineers.

It's extremely user friendly. It has a host of channels that are easily accessible. It's easy to download and their customer service team is technically well trained and is reacting quickly to questions you might have.

But the best of this software is their high high-definition picture quality of a very fast number of available channels.

[Click here to go check it out now](#)

iSoftwareTV: The Runner-Up

Rating: 

Another piece of great software is made by iSoftwareTV, our runner-up in our satellite tv on pc review.

I was hesitating to award this piece of excellent software as the winner in our satellite tv on pc review as iSoftwareTV lets you navigate extremely easy and quickly find your favorite TV shows and movies.

Besides, they are offering a wide variety of features that make it possible to customize your viewing experience just the way you like it. It's the perfect balance of simplicity and fully-featured navigation.

#2: iSoftware TV

Though this software is **even slightly better than Satellite Direct**, it comes as **#2** in this satellite tv on pc review as their customer service staff was not that well trained as the staff of Satellite Direct.

[Click here to go check it out now](#)

#3: Satellite TV For PC

Satellite TV for PC: The number #3

Rating: 

This third piece of software in our satellite tv on pc review is another gem in the Internet TV software market. It gets you over 3600 channels and offers great customer service.

Satellite TV for PC has been the market leader in Internet TV software for more than 2 years and has consistently improved their software performance over that period.

However, their technology is still based upon the 'old' platform where SatelliteDirect and iSoftwareTV use latest software technologies. Therefore the interface is somewhat more cluttered which makes navigation slightly more difficult in relation to the software of SatelliteDirect and iSoftwareTV.

[Click here to go check it out now](#)

The best software packages are clearly those those of SatelliteDirect and iSoftware TV. Just make your own choice, depending on your needs. They all won't disappoint you and will provide you with a great viewing experience.

Get Your Satellite Direct Internet TV Software now and watch Free Internet TV with more than 3500 channels.

Get Your Satellite Direct Internet TV Software now and watch Free Internet TV with more than 3500 channels.

All You Need To Know About Satellite TV software

The New Way to Watch Satellite TV is with Satellite TV Software: It's Cheap and offers Best Picture Quality.

You probably pay a lot for monthly TV services right now. I did as well, until a couple of months ago. You should now that TV entertainment is a huge market and many companies can ask exorbitant prices. Besides, many companies still apply old technology, but with the rise of all the new innovations that internet brings, many of these old technologies prove to be too expensive. One of these new internet innovations is Satellite TV Software.

Now you can watch satellite TV online with Satellite TV software. It requires no disk, no hardware, no monthly payment and no contract and besides it much cheaper. You only have to make a one-time payment and after that, you will be able to watch TV on the internet as long as you want.

The most satellite TV networks don't like it that people are watching satellite TV online with satellite TV software. That is logical because they are losing a lot of clients. You as a TV viewer couldn't care less of course because you will benefit from all the convenience of satellite TV software. But obviously, it will not take long before these companies will enter the online market as well with a consequence of increased prices!! Therefore it is a good idea for you to get satellite TV software now before it will be too expensive. You can download the software now from the internet.

Get Your Satellite Direct Internet TV Software now and watch Free Internet TV with more than 3500 channels.

But beware!!! Not all software packages are legal and some even contain malicious software. When you download the 'wrong' satellite TV software it is possible that your computer can be exposed to viruses, malware and a lot of other problems. Furthermore there is the possibility that this software will have a poor quality, little TV program selection and a bad audio quality. Beware of free editions of satellite TV software or other dodgy looking internet download pages. They will give you more harm than good! Check out our [Satellite TV on PC Review](#) to know which Satellite TV Software is the best program available in the market today.

The Satellite TV software will give you lots of channels to choose from. Some even more than 3500! Can you imagine? There will always be a channel that you are interested in whenever you watch TV! From Live sports games, videos, series, the latest news or kids programs, for everyone there is something interesting.

Everyone knows that a satellite dish to watch TV can be interfered, especially in places with bad weather conditions. Because of something stupid like rain you will have an affected and poor TV signal. You will recognize this. You are

watching your favorite series and then the channel is cut-off because of the rain! It is not normal. And your day will be ruined. With Satellite TV software you will not have this problem anymore. On every time of the day, whatever weather you are dealing with, you will have great quality and non-stop TV the whole day long. Check out our [Satellite TV on PC Review](#) for the best Satellite TV Software packages available.

Get Your Satellite Direct Internet TV Software now and watch Free Internet TV with more than 3500 channels.

Get free Tv on your computer

With the progress on internet technology, you can now watch almost any TV program on your computer....

...not just your favorite TV programs, you can also watch live sports and films from around the world.

It will be a hard choice which TV stations to watch when you are watching TV on your computer, because of the huge number of channels.

There is quite a large number to choose from. In the United Kingdom there are more than 80 channels and in the US there are even more than 600 stations. Also there are more than 70 countries that broadcast TV channels via the internet and that you can get on your computer.

You are able to watch the newest TV shows on your computer from all around the world for free. What's more, there are more than 40 stations with the newest music releases, concerts, festivals and other videos from all over the world. The choices are endless. How about all the live sports from your favorite sports team that are not shown on standard satellite TV. Or all the children's series your kids will be able to watch.

Get Your Satellite Direct Internet TV Software now and watch Free Internet TV with more than 3500 channels.

As soon as you have paid a one off lifetime subscription payment you are able to watch TV on your computer everywhere you have internet access. Your internet connection will give you the TV stations, so there is no need to buy any added hardware equipment or a PC TV card.

Before I discovered the existence of free Internet TV, I spend almost \$70 per month on satellite services payments. What I like about satellite TV on your computer is that you don't have to pay any monthly charge.

To receive the highest quality a broadband internet connection is recommended. The best audio and video quality of radio stations and internet TV is guaranteed with broadband.

Be alert on bad satellite TV software packages. Many don't provide good quality. Before you commit yourself, [check my review first](#). I only selected three software packages that provide best value and are 100% legal.

Get Your Satellite Direct Internet TV Software now and watch Free Internet TV with more than 3500 channels.

Watch Satellite TV on PC, TV or Cable TV -- Which is Best?

Watch satellite TV on PC, TV or cable TV? This is a question of choice but not on equal grounds since each have its strengths and weaknesses. According to a national wide survey, an average American probably spends more than 16% of his time in an entire year watching TV. This translates to about two months in a year which is more than half the time we spend on sleeping. Another staggering fact is more than two-thirds of American homes own more than three TV sets. TV is part of American culture. Discover what the differences are to help you decide whether to watch satellite TV on PC, TV or cable TV.

What are some of the differences? Should you watch satellite TV on PC, TV or cable TV?

1. Locality and Accessibility

Cable TV tends to be well-received in built-up areas since it is not affected by terrains and weather. However, in places where cable technology has not reached, such as rural areas or some suburban districts, satellite TV is their choice. In fact, you can set up a satellite dish system to watch satellite TV on your TV from any part of the world so it has a worldwide appeal. Where you can have internet access, you can watch satellite TV on PC readily.

2. TV Reception

You should not have any problem to watch satellite TV channels with clarity as long as your satellite dish system is set up for clear line of sight with the satellites. High rise buildings are ideal places for such systems as the satellite has full view of the skies. Needless to say, cable TV is able to receive and display TV channel feeds with a certain degree of clarity. However, since the reception of satellite dish system depends on external conditions such as weather, it may be less reliable during different seasons of the year. Fortunately, you can overcome this if you watch satellite TV on PC. Watching PC satellite TV is not constrained by weather or nature elements since they receive their feeds via internet connections which is a highly reliable media portal.

Get Your Satellite Direct Internet TV Software now and watch Free Internet TV with more than 3500 channels.

3. Variety of TV Programs

Satellite TV is a clear winner in this. Since it is made to receive free-to-air broadcasts, you can practically watch any channel as long as your satellite dish system can cover it. Nowadays, you can even watch satellite TV on PC if you prefer not to touch a satellite dish. Even though cable TV has been working hard to secure more channels for their subscribers, it is still pretty self-limiting in the number of TV channels it can offer. With satellite TV, you get to watch worldwide TV channels from any country and in any language.

4. TV System Installation

When you watch satellite TV, there are in fact three options. Either you build your own satellite dish system to receive free-to-air broadcasts or you can take advantage of free equipment installation provided when you subscribe for monthly satellite TV program packages with the service providers. The third option which is a new one is to watch satellite TV on PC using software application and internet connection. This is simply the easiest way to watch satellite TV.

Get Your Satellite Direct Internet TV Software now and watch Free Internet TV with more than 3500 channels.

5. Pricing

Satellite TV has an unfair advantage over cable TV in this aspect. Cable TV providers have to pay heavier levies charged by the state governments since the infrastructural makeup is more complicated and intensive than satellite TV providers which are light in infrastructure. Capital costs for cable TV companies are higher and with the advent of digital TV becoming the next big thing, it is a matter of time when they have to upgrade those million miles of ground-embedded obsolete cables. This is why satellite TV providers are able to charge less for more. In fact, if you watch satellite TV on PC, you can do away with monthly subscriptions and expensive Do-It-Yourself (DIY) style dish systems since you only pay once for the PC satellite TV software.

So I certainly hope this article can help you in making a choice between satellite or cable TV. This article may be freely reprinted or distributed in its entirety in any ezine, newsletter, blog or website. The author's name, bio and website links must remain intact and be included with every reproduction.

Satellite TV For PC - How Does it Work and Why is it So Simple to Use?

Satellite TV for PC. What is it and how does it work? Is it a card or adapter that you plug into your PC? Do you hook up your existing Satellite TV box directly to your PC to watch TV shows on? The answer is it that it is something even simpler. Satellite TV for PC is nothing more than a software package that you install onto your PC.

The software itself is very straightforward and the system requirements are very minimal. Most PC's that were built within the last 10 years will work for this software. You also need access to an internet connection. While the speed of an internet connection is important, more is always better, the bandwidth requirements for this software are not that high.

Most people will be able to download and install the software in a very short period of time. The configuration of the software is laid out for you and does not take very long to do. Once you have Satellite TV for PC software setup you are ready to start your selection.

Get Your Satellite Direct Internet TV Software now and watch Free Internet TV with more than 3500 channels.

You now have access to literally thousands and thousands of choices with shows ranging from sitcoms, to comedies to dramas, to sporting events along with several different language options like German, Spanish, French, English, Japanese and many many more.

If you are not a big TV show watcher and don't have a lot of interest in watching TV on your PC then these systems probably are not going to be useful for you.

Satellite TV - What is it and How Does it Work

You may have already seen several households all around the United States, especially in rural areas, with compact dishes hovering on their rooftops. That means these households have satellite TV and are enjoying the services of satellite television companies.

Satellite TV is another way of delivering television programming to the viewers. It is a lot similar to broadcast television. Both of them transmit programming with the use of radio signals. However, there are some limitations to broadcast television.

Broadcast vs. Satellite

Broadcast stations make use of a powerful antenna to transmit radio waves to the surrounding area within a specific range. The viewers of broadcast TV have a smaller antenna to pick up these signals transmitted by the station.

However, the smaller antenna should be in the direct line of sight of the station's antenna to be able to receive a good signal. The signal received is also often distorted unless the receiver is very near the transmitting station.

Satellite TV companies, on the other hand, have a solution to the range and distortion problems of broadcast TV. It transmits broadcast signals through satellites orbiting the Earth. Since these satellites are situated high in the sky, there are definitely more receivers in the line of sight of the transmitted signal.

Get Your Satellite Direct Internet TV Software now and watch Free Internet TV with more than 3500 channels.

How It Works?

The systems make use of satellite dishes which are specialized antennas to transmit and receive radio signals. The communication satellites used in a TV are launched into space at about 37,000 km above the Earth's surface at the speed of around 11,000 kph. With this speed and altitude, the satellite can keep pace with the Earth's movement exactly which means it revolves around the Earth once every 24 hours.

The satellites are also in geosynchronous orbit which means they stay in a single location in the sky relative to the earth. Thus, the dish needs to be directed at the satellite once as long as everything works fine.

Satellite television starts with a transmitting antenna situated at an uplink facility. The uplink dishes are directed at the satellite to transmit signals to as much as 9 to 12 meters in diameter. The bigger the diameter, the more improved the reception will be. The signal is transmitted to transponders on-board the satellite, which retransmit the signal back to the Earth using a different frequency.

The signal is quite weak due to travel in space. However, this signal, once collected by the parabolic dish, is down-converted to a lower frequency band then amplified using a low-noise block down-converter, or LNB.

Get Your Satellite Direct Internet TV Software now and watch Free Internet TV with more than 3500 channels.

Types of Distribution

There are two primary kinds of satellite television distribution, namely television receive-only (TVRO) and direct broadcast satellite (DBS).

Television receive-only is a satellite TV reception device based on open standards equipment. This type is often referred to as the big dish TV. TVRO systems more often use larger dishes since a C-band setup is more common to owners of this system, although it is designed to receive signals both from C-band and K u-band signals.

Direct broadband satellite TV is also known as "direct to home". DBS systems are also referred to as the "minidish" systems as it uses small dish that we commonly see around. This system uses the upper portion of the K u-band.

Satellite TV is getting more popular nowadays. It can be a good alternative to the regular broadcast TV or the more common cable TV.

How to Watch Free Live Sports Through Satellite TV

In its early years, television relied on sports to grow. TV manufacturers broadcast sports programs to boost viewer ship so that they could sell more sets. Things have changed and today, we make additional payment over subscription fees in order to watch sports on TV. We should not. Satellite and cable companies have the habit of imposing pay-per-view on popular sports events, be it boxing, football, tennis or other sports. Computer makers should pull the same trick like TV before and telecast those sports programs free so there's win-win once again. We can then write off those cable and satellite TV providers.

Actually, something to that effect has already long been done. It's Free To Air Internet TV, where satellite TV is streamed directly to our computers over the internet. FTA internet TV is not brought forth by the computer manufacturers though and operates on the aged-old basis of advertisement and sponsorship support and subsidy. Most of these broadcasters, if not all, have their own targeted agenda. Whatever that may be, we get our sports free in return for watching their bundle, similarly an aged-old and fair deal.

Get Your Satellite Direct Internet TV Software now and watch Free Internet TV with more than 3500 channels.

There's another type of internet TV providers. They charge a fee for their service although the majority of what they stream is FTA sourced. Their value-add is in assembling ready-made internet TV through their specialized and proprietary software and facilitate them to their subscribers which would otherwise be time-consuming and onerous for the individual viewers to go it themselves. Thousands of channels from all over the world comprising across the board genres and not just sports are standard features. While a fee is involved, it's one-time for a lifetime.

Another thing about sports on computer is its mobility. With WiFi internet zones getting commonplace nowadays, you can watch that big game live in trains, coffee houses, restaurants or wherever while on travel, at work or whatever you're engaged in. Being on internet infrastructure, it is also much more solid in terms of bad weather immunity and coverage.

Although the world is flat now as coined by author-journalist Thomas Friedman, time zones will never be. Game time at playing venue may be office, school or bedtime for the viewer so the computer, especially if it's a laptop, will go more handily to where the conventional TV set would find too bothersome or conspicuous to.

Now that you know the benefits of watching [Live Sports On Computer](#), find the resources at [Watch Sports On The Computer](#)

Satellite TV Picture Quality For Your Computer

This article is intended to explain how the satellite TV picture quality can be loaded directly to your computer. It's still your computer but has the satellite TV quality that one would expect from their satellite.

With the ability of today's high-speed internet, it is possible to watch television through your computer. Software has made it possible to turn your computer into a satellite television by converting the cable link to your computer. Thousands of channels are available through the internet and can turn any computer into a satellite TV.

Since this technology is regulated through the internet, it is entirely legal. It works with most operating systems including Windows 2000 and Windows XP. Fortunately, for many, it doesn't require any special computer knowledge. If you can install a program that you've downloaded then you can install this program and be watching television in a matter of minutes.

One of the amazing aspects to satellite TV picture quality software is that there aren't any reoccurring costs. One should be aware that you do need to pay for your high-speed internet costs, but as far as paying for the quality satellite television, there are no additional fees once the software has been loaded.

Get Your Satellite Direct Internet TV Software now and watch Free Internet TV with more than 3500 channels.

For many, satellite TV picture quality, is a must for them, given their profession. Many sales people have installed satellite television quality software onto their laptops and once at the hotel for the evening connect to the high-speed internet that is provided and can watch thousands of channels in a variety of languages.

With the internet providing the feed for the satellite television, it enables the viewer to watch local and extended network programs. Television shows from across the world are available with this software program.

Satellite TV picture quality is a great way to have more televisions in the house and also provides programs that one would never be able to see without the internet. In addition, it is great for traveling and wanting to watch your favorite sports game. If you are interested in learning more about this, click on the link provided.

Satellite TV For PC - A Cheap Alternative

Satellite TV for PC must be one of the most innovating and convenient "inventions" in recent times. One of the main advantages of watching satellite TV on your PC is the price as it cost far less than watching satellite TV on your home theatre system. Obviously the size of the screen that TV is being watched on cannot be compared as a home system out ranks a PC by far but satellite TV for PC may not have been developed primarily for in house home entertainment.

In a nutshell satellite TV for PC works from software that gets installed on a PC and then TV stations can be downloaded via the internet and watched on the PC. Most software programs provides for over 3000 TV stations that can be watched from the convenience of your PC. This in most cases is for a once off payment and absolutely no further hardware installation is required. What a person might need to check up on is whether the speed of the internet connection plays a vital role in the picture clarity etc.

Where satellite TV for PC might prove to be very worth while is for the seasoned traveler or business man that needs to be in touch with world news for instance or even need to watch an important sport event or favorite movie for example. Most hotels offer free TV service but sometimes the amount of stations available is limited and in order for certain stations to be unblocked might require an additional fee. This is where satellite TV for PC comes in very handy and can even proof to be more cost effective.

Exactly what the requirements of a certain PC should be in order for satellite TV for PC to function properly should be must be established before hand to avoid any technical glitches. Pertinent questions like battery life, processor speed, internet connection and memory required should be asked before hand if at all applicable.

Get Your Satellite Direct Internet TV Software now and watch Free Internet TV with more than 3500 channels.

Who knows satellite TV for PC might evolve to more than just TV and we might see the beginning of a very interesting start of technology. Every person need to establish the reason for wanting this convenient technology at their finger tips but on the other hand having satellite TV for PC available might just be a nice to have should the need arise to watch TV or your favorite sports match even if it is just to kill some time at the airport for example. Watching TV while sitting in the traffic is obviously not recommended but waiting for kids while a sports match is interrupted or for an appointment where the person you suppose to meet is late might help to kill some time and alleviate some stress having to wait with nothing better to do.

Watch Satellite TV On Computer - Go Or No-Go?

People realize they need not struggle with monthly TV bills when they start to **watch satellite TV on computer**. It is not an understatement as many satellite TV viewers do pay a huge chunk of their bills to the local TV service providers. You really cannot blame the providers for the kind of bills they are charging. After all, a lot of times, TV viewers got themselves to be blamed for choking up long hours of TV view time with pay-per-views and LIVE broadcasts that simply ramp up the charges. Yet, we need to be sympathetic towards the TV viewers. Everyone wants to watch satellite TV and enjoy hours of TV entertainment without the pain of paying large bills. So it seems that to watch satellite TV on computer is the solution to this dilemma.

To watch satellite TV on computer, you got to use appropriate tools to enable your computer to display TV feeds. There are a few ways to do it but for simplicity's sake, we are only going to look at using PC satellite TV software, the simplest, newest and the most affordable method to catch LIVE TV broadcasts from satellite TV stations around the world.

Pull Factors For You To Watch Satellite TV On Computer Using Software

There are pull factors that would swing you over to watch satellite TV on computer from your usual choice. Nowadays, software applications are easy to install. The PC satellite TV software is similarly simple to download and install unlike using the traditional satellite dish. Satellite dishes are not easy to build and maintain and can be costly.

People love convenience. If they can watch satellite TV as and when they wish, they like the idea. This is the case when you watch satellite TV on computer. It does not take a rocket scientist or a computer whiz to know how to use the software to tune into the different TV channels. Just a few clicks on the mouse and you can easily search and find a program of your choice. Channel management is important as there are literally thousands of TV stations. You simply cannot remember every single one of them and this is where the powerful user feature of your software can step in and organize things a little bit.

Whether it is the latest movie or the special game show you are looking for, there is a likelihood of finding the program. Since the whole pool of TV stations originate from many countries around the whole world, you can watch satellite TV channels which you cannot find in your own country. Not only so, the picture and audio quality of these programs featured are excellent and would delight TV viewers.

Get Your Satellite Direct Internet TV Software now and watch Free Internet TV with more than 3500 channels.

Earlier, we talked about the TV bills. The software used to watch satellite TV on computer does not require recurring payments. It carries a single price tag which falls within a range that is reachable for most families. Once you purchase it from the online vendors, you can put the months of paying subscriptions to TV services behind you and enjoy this new found money saver while not compromising on your TV entertainment quality.

Who Should Not Watch Satellite TV On Computer?

Because of its convenience and simplicity, people watch satellite TV on computer. But it is also this convenience that makes some turn away from watching TV on their computers. Parents cannot control what time their teens stop watching TV at night because the computer is hidden away from their sight. If you only have one computer, that also means that your siblings and parents might crowd around in your room.

If you wish to explore about the PC satellite TV software people are using to **watch satellite TV on computer**, check it out at my website and sign up for my satellite TV mini-series.
